System Concept

AiriEngine is a support system designed for GhostTrading – a trading style that operates without traditional Stop Loss mechanisms. It utilizes the GhostPilot module to receive user signals, and the BufferGuard module to close trades once the total buffer profit is sufficient, instead of cutting losses per position.

The system also includes SafeGrid, which ensures safer trade entry spacing. AiriEngine is ideal for beginners looking to train in real market conditions without managing their own portfolio, and it integrates gamified motivation through EXP, Ranks, and Quests.

System Modules

1. GhostPilot – Signal relay and trade execution controller
2. BufferGuard – Closes trades when buffer profit is sufficient
3. SafeGrid – Grid-based entry zones with safe distance logic
4. GuildDeck – Displays trader profiles with EXP, Rank, Level
5. GuildFund – Internal funding system for qualified traders
6. SmartTPGuard – Intelligent dynamic Take Profit manager
7. SafeStopShield – Adaptive Stop Loss module based on behavior or risk level

Roadmap Preview

- Integrate SmartTPGuard and SafeStopShield with GhostPilot
- Support Dynamic Risk/Reward configurations (e.g., 2:1, 3:1)
- Add Trailing TP and Virtual SL functionality
- Develop a Simulation Mode for non-funded users

Trademark & Ownership Notice

“AiriEngine” is a proprietary name used exclusively by fx2trade.com to refer to its internal trade management and risk control system.

Unauthorized use of this name, in whole or in part, for commercial purposes or in a way that causes confusion with fx2trade.com’s services is strictly prohibited.

Use of the name, concept, or system in this document without prior permission may constitute a violation under applicable intellectual property laws.
